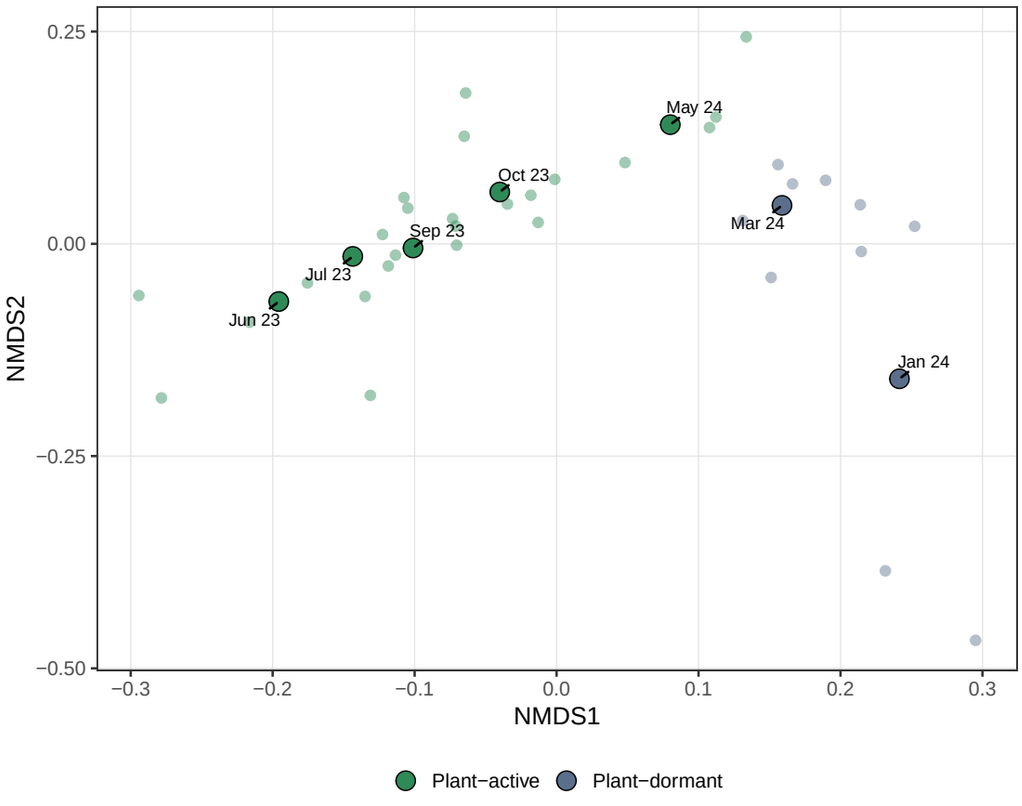
A

Which functions were expressed (all 325 BRITE C categories)

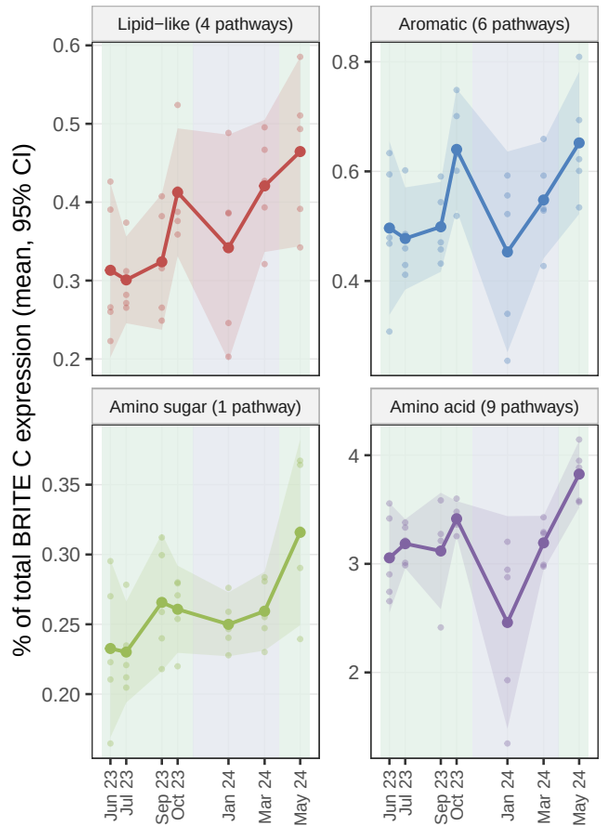
Small points: samples; large: date means. Season test with dates as replicates:
R^2 = 0.52, p = 0.048 (smallest p possible with 2 dormant dates = 0.048); spread p = 1.000



B

Expression of each class's pathways (summed)

Share of all transcript expression; points are plots, line is the date mean



C

Each pathway linked to only one compound class: when was it high or low?

Red = above that pathway's own average, blue = below. In brackets: share of all expression. Dormant dates in bold.
