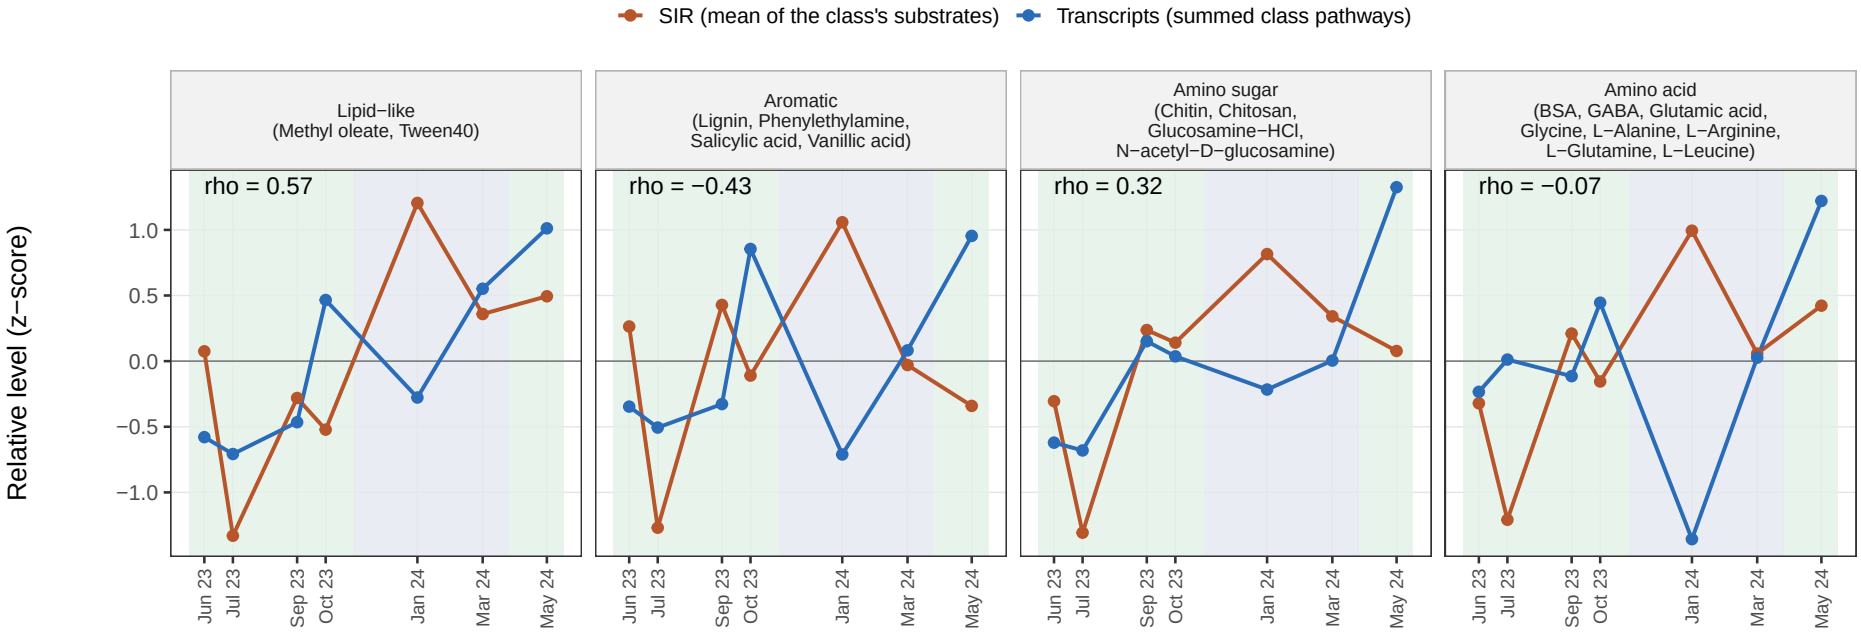
A

## Do SIR and expression rise and fall together? Same−date values at the seven transcript dates

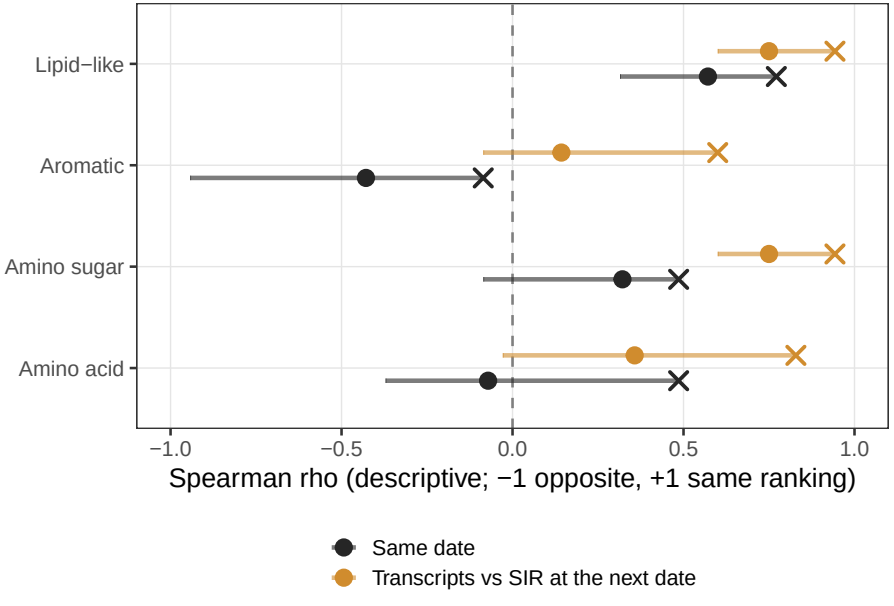
Both measures rescaled to their own average (0) and spread (1), so only timing and direction are comparable



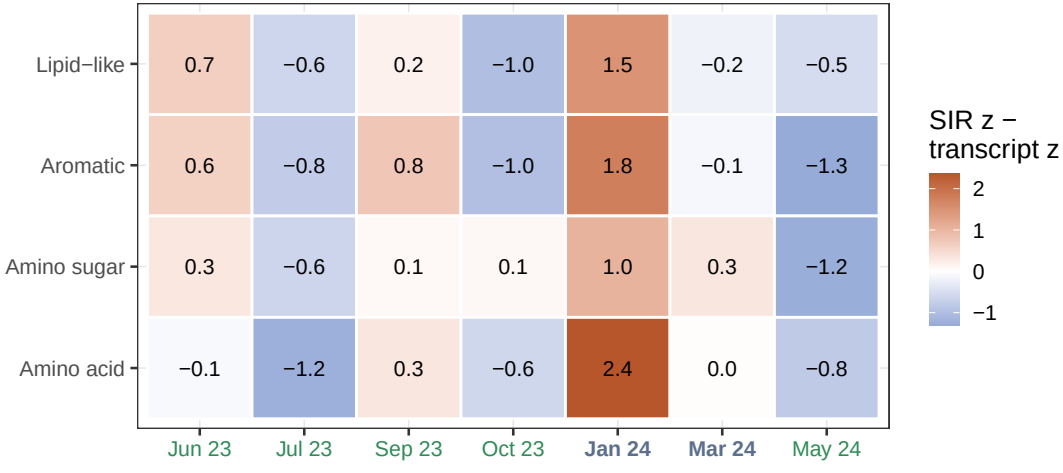
B

## How closely they track (Spearman rho, 7 dates)

Dot: all dates. Bar: range when any one date is left out. X: without January.



C

## Where they disagree: SIR minus transcripts at each date


Brown: SIR relatively higher than expression; blue: the reverse. Dormant dates in bold.
