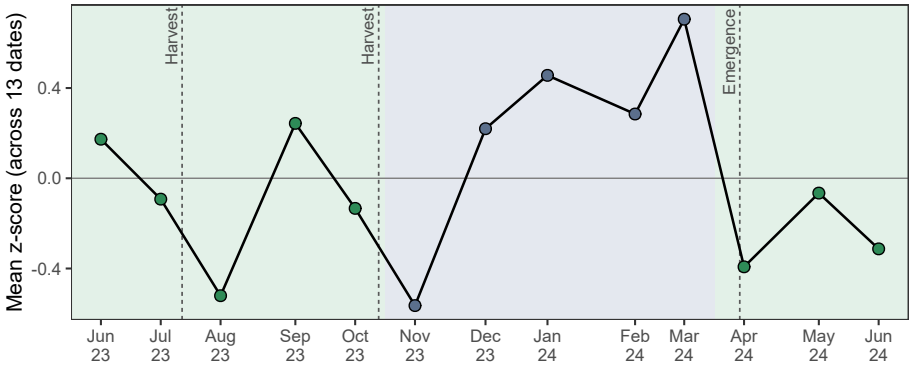
A

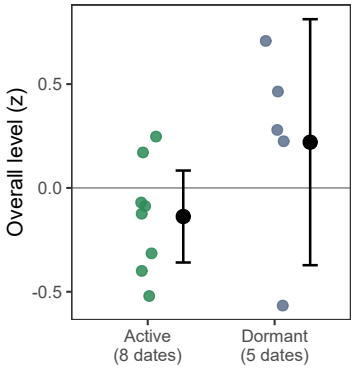
Overall level per unit biomass (date level): mean z across 31 substrates



B

Season comparison

Dormant − active = 0.36
95% CI -0.22 to 0.94
p = 0.179



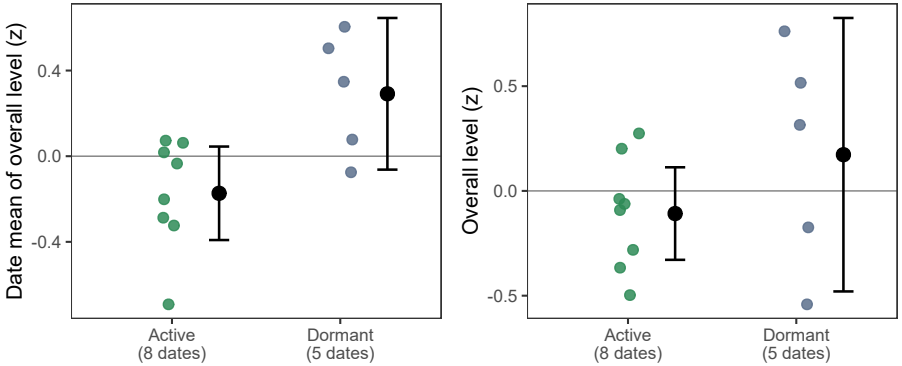
C

Without SM1420: primary (per mg C)

Dormant − active = 0.46
95% CI 0.10 to 0.83
p = 0.018

Without SM1420: per biomass (date level)

Dormant − active = 0.28
95% CI -0.36 to 0.92
p = 0.315



Per biomass: date-mean response per mg C added / date-mean MBC (SM1625 and SM1539 MBC set to missing, Step 0), z-scored per substrate across the 13 dates. No plot-level points or CIs in A: values exist only at the date level.
